In connection with President Wilson's advocacy of a tariff commission Secretary of Commerce Redfield expresses the opinion that the cost of production division of his department would amply serve the purpose; and it will be recalled that President Wilson once taunted the Republicans in a statement to the effect that in the bill creating the Federal Trade Commission the Democrats had "put one over" by giving the commission the powers of a tariff board, although Representative Mann replied that the Republicans were more responsible for that feature of the law than their opponents. At least there appears to be no danger of a shortage of cooks.

Looking Ahead to Peace.

Reflection that the European war was chiefly esponsible for the fact that the earnings of the United States Steel Corporation in the last quarter of 1915 were \$5,729,000 greater than in any previous quarter, thus justifying the restoration of the old dividend rate of 5 per cent on the common stock, is not interfering with the rejoicing of the business world or neutralizing the stimulus that that at present the prosperity barometer is moving in the right direction. Yet, in the midst of the optimism, it is well for us all-and especially the nation's lawmakers-to keep in mind that every day sees the end of war nearer, the belligerents nearer the end of their resources upon which we have been fattening. And when the end does come, there will be sudden and tremendous falling off in our sales abroad. Against this day we should already be preparing by increasing our own purchasing and consuming power, so that we shall have a greater home market for the products of our fields and factories. This cannot be done unless rogress, enterprise and industry are encouraged, and they can best be encouraged by refraining from unwise and hampering legislation. The country's prosperity is largely in the hands of the political party in control of the government. If it proves equal to its responsibility, if it fosters and encourages enterprise in every legitimate form instead of retarding it, when the war ends a part of our manufacturing energies that have been devoted to the production of implements of destruction can be turned to the making of materials for construction-steel rails and steel cars and steel for skyscrapers. The needs of our railroads in the way of improvements, extensions and new equipment are great. If the roads are not menaced and discouraged by the prospect of blighting laws, the supplying of these needs will keep many thousands of workmen now employed in making war munitions busy long after peace is declared in Europe, and thus the country's prosperity will be con-

The Temptation.

By JOHN D. BARRY. A man unexpectedly met a temptation. As he was busy he did not pay much attention. But he noticed that it was attractive and, in passing, as smiled at him, he smiled back. Then he forgot all about it.

But the temptation didn't forget.

Not long afterward the man met the temptation again, seemingly by chance.

The temptation smiled. The man smiled, too.

"I'm sure we've met before," said the tempta

The time came when the man lost nearly all of his friends and nearly everything that made life attractive except the temptation.

In his disappointment he relied on the tempta tion more and more. Whatever else might fail, he knew that it would be faithful. No matter how he might suffer, it was always ready to give solace.
